

Elbit Systems Ltd.
Conflict Minerals Report
For the Year Ended December 31, 2016
In Accordance with Rule 13p-1 under the Securities Exchange Act of 1934

A. Introduction

This Conflict Minerals Report (this “Report”) of Elbit Systems Ltd. (together with its subsidiaries, “Elbit Systems” or “we”) for the year ended December 31, 2016 is presented to comply with Rule 13p-1 (the “CM Rule”) under the Securities Exchange Act of 1934.

The CM Rule was adopted by the U.S. Securities and Exchange Commission (“SEC”) to implement reporting and disclosure requirements related to “conflict minerals” under Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. Pursuant to Section 1502, publicly traded companies, such as Elbit Systems, must report to the SEC whether “conflict minerals” (tantalum, tin, tungsten and gold) (“3TG”) originating in the Democratic Republic of Congo (DRC) or adjoining countries (Angola, Burundi, The Central African Republic, The Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda and Zambia) (the “Covered Countries”) are present in the products the company manufactures or contracts to manufacture, if any of the 3TG is necessary to the functionality or production of such products. The CM Rule was adopted because the sale of 3TG mined in the Covered Countries has funded armed conflicts in that region, and those conflicts have led to numerous human rights abuses and atrocities.

Unless otherwise defined herein, the terms used in this Report have the meanings ascribed to them in the CM Rule, Form SD and SEC Release No. 34-67716 issued by the SEC in 2012.

B. Company Overview

Elbit Systems Ltd. is an international high technology company engaged in a wide range of defense, homeland security and commercial programs throughout the world. We operate in the areas of aerospace, land and naval systems, command, control, communications, computers, intelligence surveillance and reconnaissance, unmanned aircraft systems, advanced electro-optics, electro-optic space systems, electronic warfare suites, signal intelligence systems, data links and communications systems, radios and cyber-based systems. We also focus on the upgrading of existing platforms, developing new technologies for defense, homeland security and commercial applications and providing a range of support services, including training and simulation systems.

C. Applicability of the CM Rule to Elbit Systems

Elbit Systems designs, develops and manufactures a broad portfolio of sophisticated products and systems in numerous programs for our customers around the world. Such products and systems often include a range of electronic components. We purchase these components from a supply chain consisting of thousands of suppliers and/or manufacturers. We collect 3TG information from our suppliers, primarily first-tier manufacturers (i.e. manufacturers contracting directly with us) of the products or components supplied to us. Through this information and our own material engineering analyses we have determined 3TG are necessary to the functionality or production of a number of our products. Therefore, we are required to make a filing pursuant to the CM Rule because we manufacture certain products for which elements of 3TG are necessary to the product's functionality or production.

We do not directly source any 3TG from mines, smelters or refiners, and we believe that in most cases we are many levels removed from these supply chain participants and therefore have limited influence over them. Furthermore, because of the depth, geographic diversity and ongoing changes in our supply chain, and due to competitive factors, we often have significant challenges in identifying the full supply chain from information provided by our direct suppliers. However, through the efforts described in this Report, we take measures so that our suppliers meet the expectations of our Conflict Minerals Compliance Policy, which is described below.

D. Conflict Minerals Compliance Policy

Elbit Systems' policy is to use "conflict free" 3TG in our products, and we support industry actions to increase supply chain transparency to facilitate the ability of companies to source conflict free 3TG. Our Conflict Minerals Compliance Policy is published on our website www.elbitsystems.com under "About Us - Ethics and Conduct - Conflict Minerals Compliance Policy."

Pursuant to our Conflict Minerals Compliance Policy, and as further described in this Report, we are taking measures to meet the applicable reporting obligations under the CM Rule and to enhance our supply chain due diligence and internal controls relating to 3TG. We are committed to sourcing materials from companies that share our values with respect to human rights, ethics and environmental responsibility. These supply chain values are reflected in our Supplier Code of Conduct, which can be found on our website www.elbitsystems.com under "About Us – Ethics and Conduct – Supplier Code of Conduct." Our policy relating to conflict minerals is an important part of our overall practices regarding responsible supply chain management and is reflected in our Supplier Code of Conduct.

Elbit Systems periodically publishes additional information about our commitment to responsible sourcing and engagement with our suppliers and other stakeholders in our

Social Sustainability Report, which includes an overview of our activities in the areas of ethics, corporate governance, environmental compliance, fair employment and support for our local communities. The Social Sustainability Report is published on our website www.elbitsystems.com under “About Us – Social Sustainability.”

E. *Overview of the Company’s Conflict Minerals Program and Reasonable Country of Origin Inquiry (“RCOI”) for 2016*

As part of our commitment to responsible sourcing, human rights and sustainability, it is our goal that the 3TG in our products should not, directly or indirectly, finance or benefit armed groups in the Covered Countries. Our efforts with respect to 3TG are aligned to the work of the Conflict-Free Sourcing Initiative (“CFSI”), and we strive to improve the traceability in our supply chain.

Elbit Systems has a Conflict Minerals Compliance and Management Review Team (the “CM Team”) that was formed to support compliance with the CM Rule, perform the RCOI and report on conflict minerals. The multi-disciplinary CM Team consists of specially designated personnel from our purchasing, quality assurance, operations, materials engineering, information technology, finance and legal departments. The CM Team is supported by outsourced services from specialists in the conflict minerals compliance and RCOI process.

We rely on our suppliers to provide information on the origin of 3TG contained in components and parts included in our products. The identification of suppliers that are relevant to us under the CM Rule involves different geographic regions, business areas and production sites throughout our organization. The CM Team plays a leading role in coordinating the supplier identification efforts. Suppliers who were identified in 2016 to be relevant for our RCOI process were identified on the basis of criteria such as the level of purchasing activities with such supplier and the likelihood that the items furnished by the supplier contain 3TG. The processes performed and described in this Report cover more than 90% of our worldwide supply chain activities relevant to 3TG.

In our annual RCOI process for 2016, we reviewed suppliers identified to be relevant under the above-mentioned identification criteria in an effort to determine the origin of the 3TG in our products. We analyzed and followed up with inquiries as we deemed appropriate where the analysis of our survey results indicated further information may be desirable. We do not have a direct relationship with 3TG smelters and refiners, and we do not perform or direct audits of these entities within our supply chain.

We utilized reporting templates and databases, such as approved smelter and refiner lists, of 3TG industry initiatives such as the CFSI, which is aligned with the Global e-Sustainability Initiative (GeSI) and the Electronic Industry Citizenship Coalition (EICC).

F. Conflict Minerals Program Design

Our RCOI activities and other 3TG-related activities are consistent with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas and the related Supplements for gold and for tin, tantalum and tungsten (the “OECD Guidance”). The design of our due diligence process, including our RCOI, conforms substantially to the OECD Guidance as it relates to “downstream” purchasers of products and components. These processes are described below under sub-headings corresponding to the five-step framework of the OECD Guidance.

Step 1 - Establish Strong Company Management Systems

As mentioned above, we have a dedicated CM Team. This Team is responsible for implementing our due diligence activities, reporting on 3TG in compliance with the CM Rule and informing senior managers and our board of directors about matters relating to our conflict minerals compliance. Our compliance policies include, but are not limited to, our Code of Business Conduct and Ethics and our Supplier Code of Conduct, which set forth expected behavior for all our employees and suppliers. The Supplier Code of Conduct includes provisions relating to conflict minerals compliance and is integrated as a standard supplement into our supplier agreements. We have internal Conflict Minerals Compliance Guidelines that set out the activities to be taken in our due diligence process. As a result of our periodic review of our processes, updates to those Guidelines were prepared during 2016. Moreover, as indicated above, we have a published company-wide Conflict Minerals Compliance Policy, for which updates were also prepared during 2016. Such updates reflect enhancements to our processes as well as comments received from third party consultants we retained to review our conflict minerals compliance program.

In 2016, identification of smelters and refiners in our supply chain was made through the use of due diligence tools, including those created by the CFSI such as the EICC/GeSI Conflict Minerals Reporting Template (the “Template”). The Template is a supply chain survey designed to identify, among other 3TG-related information, the smelters and refiners that process the necessary 3TG contained in our supply chain. The information from our suppliers, in combination with information from the CFSI, helps us to obtain information on the origin of the 3TG processed in our supply chain. Data obtained was reviewed and analyzed by us and is retained in our company records for the five-year period required by the CM Rule.

While our principal purchasing activities are conducted through our facilities in Israel and the U.S., during 2016 we also took measures to enhance implementation of our 3TG compliance process at our subsidiaries located in other countries.

We have grievance mechanisms under which employees and suppliers can report violations of our policies. This includes a whistleblower process for the reporting of alleged violations of laws or our Code of Business Conduct and Ethics, including issues relating to corruption, involving questionable accounting or auditing matters or which

otherwise may seriously affect significant interests of Elbit Systems. This process is overseen by Elbit Systems Chief Compliance Officer and by the Chair of the Audit Committee of Elbit Systems Board of Directors. Our Conflict Minerals Compliance Policy and our Supplier Code of Conduct also contain reporting mechanisms for reports to applicable Elbit Systems' management personnel.

Step 2 - Identification and Assessment of Risks in the Supply Chain

Our CM Team leads a process to identify and assess 3TG-related risks. We attempt to focus this process on the most relevant level in our 3TG supply chain, which is the smelters and refiners. As stated above, we require our suppliers to provide identification information relating to smelters and refiners in our supply chain.

During 2016, suppliers meeting our applicable 3TG criteria were requested by us to provide information on 3TG in their supply chains through completing and submitting the Template. Suppliers were provided with support material, including the generally available CFSI instructions and training illustrating the use of the tool that is available on CFSI's website. To support the quality of the response and a high response rate, the responses received were analyzed on an ongoing basis and followed up as deemed appropriate by members of the CM Team. Supplier responses were reviewed against risk level criteria developed or utilized by us to determine: (1) the risk level applicable to the supplier regarding 3TG and (2) which responses require further engagement with our suppliers, such as when the responses from suppliers were incomplete. Suppliers were contacted via e-mail or telephone to improve the quality of responses and increase the response rate.

Step 3 - Design and Implementation of a Strategy to Respond to Identified Risks

Under the third step of the OECD Guidance framework companies are encouraged to design and implement a strategy to respond to identified risks. Our due diligence is an ongoing process, both proactive and reactive, where suppliers are evaluated against our conflict mineral risk categories on a continuous basis to facilitate conflict mineral compliance in the suppliers' processes.

Our due diligence process categorizes suppliers' responses regarding 3TG under one of the following six conflict mineral risk categories ("DRC or an adjoining country" has the same meaning in this context as "Covered Countries"):

1. *Free/No 3TG* - The 3TG is not intentionally added to the product and not necessary to the production of the product.
2. *Free/Not From DRC* - The 3TG being used in the product do not originate from the DRC or an adjoining country.
3. *DRC/Conflict Free* - The 3TG being used in the product originate from the DRC or an adjoining country; however, the smelters and refiners have been approved by the CFSI program.

4. *Undetermined/Not from DRC* - The 3TG being used in the product do not originate from the DRC or an adjoining country, but to date the supplier has not provided complete information on all of its sources of supply.
5. *Undetermined/from DRC* - The 3TG being used in the product originate from the DRC or an adjoining country; however, the smelters and refiners have been approved by the CFSI program, and to date the supplier has not provided complete information on all of its sources of supply.
6. *DRC/Not Conflict Free* - The 3TG being used in the product originate from the DRC or an adjoining country, and the smelters and refiners have not been approved by the CFSI program.

During 2016, we used this risk-based approach for reviewing and following up supplier responses, where responses were incomplete or indicated an “Undetermined” or “Not Conflict Free” status.

We continuously worked to improve our due diligence processes with respect to 3TG, mainly focusing on the quality of data received from suppliers surveyed. This included communication and collaboration with suppliers for purposes of improving the response rate of surveyed suppliers and improving the reliability and quality of the information provided.

Step 4 – Carry Out Independent Third Party Audit of Supply Chain Due Diligence and Identification Points in the Supply Chain

In the fourth step we focus on review of smelters’ and refiners’ 3TG practices. Since, as mentioned above, there are generally many tiers of suppliers between Elbit Systems and the smelters and refiners in the supply chain, we have not performed our own audits of smelters or refiners.

During 2016, we reviewed the data received from our suppliers with respect to smelters and refiners and compared such information against the lists of facilities that have received either an “active and compliant smelters” or a “Smelter Reference List” designation from the CFSI.

Although we are not currently required to conduct an Independent Private Sector Audit under the CM Rule, during 2016 we took steps, such as enhancing our internal controls, to prepare us for such an audit in the future, if applicable.

Step 5 - Report on Supply Chain Due Diligence

In compliance with the fifth step of reporting on supply chain due diligence, and in accordance with the CM Rule, during 2016 we made our Conflict Minerals Report available on our website: www.elbitsystems.com under “Investors Relations – SEC Filings.”

G. 2016 Conflict Minerals Program Results

For the calendar year 2016, our due diligence was conducted at the supplier level, mainly first-tier manufacturers. In most cases, the supplier responses received provided data at the supplier's general company or divisional level. The response rate among suppliers surveyed in 2016 was approximately 75%. Among the supplier responses, we identified 298 smelters or refiners as potential sources of 3TG that were reported to be in the supply chain through the end of the 2016 calendar year, that were designated by CFSI as "active and compliant smelters" or on the "Smelter Reference List". These smelters and refiners appear in Annex 1 to this Report. As noted under "Future Activities" below, we will conduct ongoing due diligence of any identified smelter or refiner who has not been so designated by CFSI.

Based on the information provided by our suppliers through the end of the 2016 calendar year, we believe that the facilities that may have been used to process the 3TG in Elbit Systems' products include the smelters and refiners listed in Annex 1 hereto.

H. Future Activities

We are continuing to refine and expand the list of participating smelters and refiners. We believe that seeking information about 3TG smelters and refiners in our supply chain represents the most reasonable effort we can make to determine the locations of origin of the 3TG in our supply chain.

During 2017, we plan to continue to review and evolve our due diligence and RCOI processes with respect to 3TG. As part of these efforts, we engaged a third party to review our conflict minerals compliance program. During 2017 we expect to: (1) implement our updated Conflict Mineral Compliance Policy; (2) implement our updated internal Conflict Mineral Compliance Guidelines; (3) continue to follow-up on incomplete or unreceived responses from suppliers; (4) further develop the collaboration with suppliers for purposes of continued improvement of the supplier response rate and the reliability and quality of information provided; (5) further refine the criteria for our due diligence and supplier selection processes; (6) further enhance our internal control processes and activities; (7) expand the training for employees and suppliers; and (8) further expand our due diligence activities to parts of our organization that are outside Israel and the U.S.

I. Forward Looking Statements

Certain of the matters discussed in this Report, including in particular our due diligence processes, include forward-looking statements. Readers of this Report are cautioned that our forward-looking statements are not guarantees of our future actions, which may differ materially from the expectations expressed in the forward-looking statements. We expressly disclaim a duty to provide updates to these forward-looking statements after the date of this filing to reflect events or changes in circumstances or changes in expectations or the occurrence of anticipated events.

The information included on our website and other materials referenced in this Report is not incorporated by reference in this Report.

Annex 1

List of Smelters and Refiners
